

Stakeholder Analysis

1. Purpose of Stakeholder Analysis

The purpose of this Stakeholder Analysis is to identify all individuals and groups that have an interest in or influence over the Laundry Shop Management System project. This analysis ensures that stakeholder needs, expectations, and potential risks are clearly understood and addressed throughout the system analysis and design process.

The analysis is based on information gathered from the client interview and on-site observation of the laundry shop's daily operations.

2. Identified Stakeholders

Based on the interview and observation, the following key stakeholders were identified:

1. Owner / Manager
2. Staff
3. Customers
4. System Development Team (Students)
5. Course Instructor / Evaluator

3. Stakeholder Analysis Table

Stakeholder	Interest / Needs from the System	What the Project Needs from Them	Risks / Concerns	Management Strategy
Owner	• Accurate tracking of laundry orders and payments • Clear visibility of paid and unpaid orders • Faster access to daily and monthly income reports • Reduced operational confusion	• Approval of project scope and objectives • Business rules (pricing, rush fees, services) • Validation of requirements and reports	• Concern about system complexity • Limited time availability	• Involve owner in requirements validation • Keep system simple and practical • Present clear prototypes for feedback
Staff	• Faster and easier order recording • Clear laundry status tracking • Reduced confusion during peak hours • Easier verification of payment status	• Accurate description of daily tasks • Feedback on usability and workflow • Participation in observation and validation	• Resistance to change from manual system • Fear of making mistakes using a computer	• Design intuitive interfaces • Minimize steps for common tasks • Emphasize how the system reduces workload
Customers	• Accurate handling of	• Indirect input through observed issues and	• Dissatisfaction due to	• Ensure reliable order tracking

Laundry Shop Management System | Stakeholder Analysis

	laundry items • Timely pickup of orders • Correct pricing and payment handling	complaints	delays or errors	• Improve accuracy and service consistency
System Development Team (Students)	• Successful completion of academic requirements • Practical application of system analysis and design concepts • Experience in teamwork and SDLC	• Clear project scope and requirements • Cooperation from stakeholders	• Risk of scope creep • Misinterpretation of client needs	• Maintain clear documentation • Enforce traceability from interview to design
Course Instructor / Evaluator	• Proper application of SAD concepts • Complete and consistent documentation • Clear justification of design decisions	• Compliance with course guidelines • Well-structured deliverables	• Penalties for weak or inconsistent documentation	• Align outputs with SAD standards • Ensure consistency across all documents

4. Stakeholder Influence & Interest Summary

- The Laundry Shop Owner / Manager has high influence and high interest, as they are the primary decision-maker and beneficiary of the system.
- The Laundry Shop Staff have high interest but moderate influence, since they will use the system daily but do not control project approval.
- Customers have high interest but low influence, as system reliability directly affects service quality.
- The System Development Team has high responsibility and moderate influence, ensuring proper system analysis, design, and documentation.
- The Course Instructor / Evaluator has high influence over project acceptance but low operational involvement.

5. Stakeholder Management Strategy

To ensure project success, the following strategies will be applied:

- The owner and staff will be involved during requirements validation and prototype reviews.
- Feedback will be collected after major analysis and design phases.
- System complexity will be minimized to match the technical readiness of users.
- All deliverables will maintain traceability from interview data to system design to meet academic and professional standards.
