

Project Roles & Responsibilities

1. Introduction

This document defines the project organization, roles, and responsibilities for the Laundry Shop Management System.

Clearly identifying roles ensures effective collaboration, accountability, and proper execution of tasks throughout the System Development Life Cycle (SDLC). This structure follows industry-standard project management practices and supports teamwork among the system development team.

2. Project Team Overview

The project is developed by a team of six (6) Information Technology students. The team follows a structured SDLC approach, with defined leadership, analysis, design, development, and documentation responsibilities to ensure project success.

3. Team Structure

The project team is organized into the following functional roles:

- Project Manager / System Analyst
- Backend Developer
- Frontend Developer
- UI/UX Designer
- Database Designer
- Quality Assurance & Documentation Lead

Each role contributes specific expertise while collaborating closely with other team members.

4. Roles and Responsibilities Matrix

Role	Assigned Member	Responsibilities
Project Manager / System Analyst	Mark Alvin Cadangin	• Lead the project and coordinate team activities • Communicate with the client and instructor • Conduct system analysis and requirements validation • Ensure scope control and schedule adherence • Review and approve all deliverables
Backend Developer	(Member Name)	• Design and implement server-side logic • Develop business rules and system functionality • Integrate database operations with backend services • Support system testing and bug fixing
Frontend Developer	(Member Name)	• Develop user interfaces based on approved prototypes • Implement navigation and user interactions • Ensure responsive and user-friendly design

Laundry Shop Management System | Project Roles & Responsibilities

		• Coordinate with backend developer for integration
UI/UX Designer	(Member Name)	• Design system prototypes and screen layouts • Apply Human-Computer Interaction principles • Improve usability and user experience • Refine interface designs based on feedback
Database Designer	(Member Name)	• Design the database schema and ERD • Define tables, relationships, and constraints • Ensure data integrity and normalization • Support backend integration with the database
Quality Assurance & Documentation Lead	(Member Name)	• Review deliverables for consistency and correctness • Ensure traceability between requirements and design • Assist in system testing and validation • Maintain and compile project documentation

5. Responsibility Assignment Notes

Laundry Shop Management System | Project Roles & Responsibilities

- While each team member has a primary role, collaboration is encouraged across tasks.
- Major technical and scope-related decisions must be approved by the Project Manager / System Analyst.
- All members are responsible for meeting deadlines and maintaining professional communication.
- Documentation and design outputs must align with the agreed project scope and client requirements.
