

Functional Requirements

1. Introduction

This document defines the functional requirements of the Laundry Shop Management System. Functional requirements specify what the system must do to address the operational problems identified during the client interview and observation, particularly issues related to manual tracking, payment verification, and limited reporting visibility.

These requirements are derived directly from the Process Matrix (TO-BE) and validated against stakeholder needs. This document establishes the functional baseline for system modeling and design.

2. Functional Requirements Organization

The functional requirements are grouped by business function to ensure:

- Clear traceability to AS-IS problems
- Direct alignment with TO-BE processes
- Logical mapping to FDD, DFD, and ERD

No requirement in this document introduces functionality beyond the approved project scope.

3. Functional Requirements Checklist

3.1. Customer and Laundry Order Recording

ID	Functional Requirement	Priority	Problem Addressed
FR-01	The system shall allow staff to create a new laundry order.	High	Manual order recording
FR-02	The system shall record customer	High	Incomplete customer records

Laundry Shop Management System | Functional Requirements

	name and contact number for each order.		
FR-03	The system shall record selected laundry services (wash, dry, fold, iron).	High	Verbal-only service tracking
FR-04	The system shall record laundry weight and special items (e.g., blankets, comforters).	High	Pricing inconsistency
FR-05	The system shall compute service charges based on predefined pricing rules.	High	Manual price computation errors
FR-06	The system shall generate a unique order reference for each laundry order.	High	Difficulty locating orders

3.2. Laundry Status Tracking

ID	Functional Requirement	Priority	Problem Addressed
FR-07	The system shall assign an initial status to each new laundry order.	High	Unclear order state
FR-08	The system shall allow staff to update laundry order status (received, processing, ready, released).	High	Memory-based tracking
FR-09	The system shall display a consolidated list of pending laundry orders.	High	No overview of unfinished orders

Laundry Shop Management System | Functional Requirements

FR-10	The system shall allow searching of laundry orders using customer name or order reference.	Medium	Time-consuming manual lookup
-------	--	--------	------------------------------

3.3. Payment Recording and Verification

ID	Functional Requirement	Priority	Problem Addressed
FR-11	The system shall record payment details linked to a specific laundry order.	High	Separate order and payment records
FR-12	The system shall indicate whether a laundry order is paid or unpaid.	High	Forgotten payment status
FR-13	The system shall prevent marking an order as released unless payment is confirmed.	High	Risk of unpaid releases
FR-14	The system shall store payment date and amount for each transaction.	Medium	Incomplete payment history

3.4. Laundry Release / Pickup

ID	Functional Requirement	Priority	Problem Addressed
FR-15	The system shall allow staff to retrieve an order for pickup verification.	High	Manual claim stub checking
FR-16	The system shall verify that an order status is "Ready" before release.	High	Premature laundry release

Laundry Shop Management System | Functional Requirements

FR-17	The system shall update the order status to “Released” after successful pickup.	High	No formal release record
-------	---	------	--------------------------

3.5. Sales and Operational Reporting

ID	Functional Requirement	Priority	Problem Addressed
FR-18	The system shall generate a daily sales report.	High	Manual daily computation
FR-19	The system shall generate a monthly income report.	Medium	Lack of income visibility
FR-20	The system shall display a list of pending laundry orders.	High	No centralized pending list
FR-21	The system shall allow viewing of historical laundry and payment records.	Medium	Limited record retention

3.6. User Access and Basic Control

ID	Functional Requirement	Priority	Problem Addressed
FR-22	The system shall restrict access to authorized users only.	High	Uncontrolled record access
FR-23	The system shall support basic user	Medium	Role confusion

Laundry Shop Management System | Functional Requirements

	roles (owner and staff).		
FR-24	The system shall provide a simple interface suitable for non-technical users.	High	Staff resistance to system use
