

Non-Functional Requirements

1. Introduction

This document defines the revised non-functional requirements of the Laundry Shop Management System. Non-functional requirements specify the quality attributes, constraints, and operational conditions under which the system must operate.

These requirements are grounded in the actual working environment of the laundry shop—small staff size, manual processes, limited technical experience, peak-hour workload, and basic hardware availability—as identified during the client interview and observation

2. Non-Functional Requirements Categories

The non-functional requirements are grouped into the following standard categories:

- 1. Usability
- 2. Performance
- 3. Security
- 4. Reliability & Availability
- 5. Maintainability
- 6. Technical & Environmental Constraints

3. Non-Functional Requirements Checklist

3.1. Usability Requirements

ID	Requirement	Description / Rationale
NFR-01	Ease of Learning	The system shall be easy to learn for users with little to no technical background.

Laundry Shop Management System | Non-Functional Requirements

NFR-02	Minimal Training	Staff shall be able to perform basic tasks with minimal training or instruction.
NFR-03	Simple Interface	Screens shall avoid unnecessary complexity and display only relevant information.
NFR-04	Clear Feedback	The system shall provide clear confirmation and error messages for user actions.
NFR-05	Efficient Workflow	Common tasks (order entry, status update, payment check) shall require minimal steps.

3.2. Performance Requirements

ID	Requirement	Description / Rationale
NFR-06	Response Time	The system shall respond promptly to user actions under normal operating conditions.
NFR-07	Search Performance	Order searches shall return results quickly to avoid delays during pickup.
NFR-08	Concurrent Usage	The system shall support simultaneous use by the owner and staff.

3.3. Security Requirements

ID	Requirement	Description / Rationale
NFR-09	Authentication	The system shall require login for access to system functions.
NFR-10	Role-Based Access	The system shall restrict access based on user role (owner or staff).

NFR-1 1	Data Confidentiality	Customer and payment information shall not be accessible to unauthorized users.
NFR-1 2	Controlled Data Modification	Only authorized users shall be allowed to modify order and payment records.

3.4. Reliability and Availability Requirements

ID	Requirement	Description / Rationale
NFR-1 3	Data Accuracy	The system shall ensure consistency and accuracy of stored order and payment data.
NFR-1 4	Error Handling	The system shall handle input or processing errors without data loss.
NFR-1 5	Operational Stability	The system shall operate reliably during normal business hours.

3.5. Maintainability Requirements

ID	Requirement	Description / Rationale
NFR-1 6	Modular Design	The system shall be designed in modules to allow easier updates and fixes.
NFR-1 7	Documentation	System documentation shall be clear enough to support future maintenance.
NFR-1 8	Change Flexibility	Minor changes (e.g., pricing rules) shall be possible without major redesign.

3.6. Technical and Environmental Constraints

ID	Requirement	Description / Rationale
NFR-1 9	Hardware Compatibility	The system shall run on commonly available computers used by small businesses.
NFR-2 0	Browser Compatibility	If web-based, the system shall function on modern web browsers.
NFR-2 1	Resource Efficiency	The system shall operate within limited hardware and network resources.
